## Quiz: Proof Theorem 28 and 29.

Proof of Theorem 29 from Björn Bokelmann

For each $i \in \mathbb{N}$ we define $Y_i = X_i - \mu$.
Because we applied a continuous mapping on $X_i$ to get $Y_i$, the random variables $Y_1, Y_2, ...$ are i.i.d..
It further holds $E[Y_i] = 0$ for each $i \in \mathbb{N}$ and therefore

$$\sigma^2 = Var[Y_i] = E[Y_i^2] \tag{1}$$

and

$$E[\sum_{i=1}^{n} Y_i] = 0 \tag{2}$$

With Bienaymes Formula we get

$$
\begin{aligned}
E[(\sum_{i=1}^{n} Y_i)^2] &= E[(\sum_{i=1}^{n} Y_i - E[\sum_{i=1}^{n} Y_i])^2] \\
&= Var[\sum_{i=1}^{n} Y_i] \\
&= \sum_{i=1}^{n} Var[Y_i] \\
&= n \cdot \sigma^2
\end{aligned}
$$

Hence it holds

$$
\begin{aligned}
E[|\bar{X}_n - \mu|^2] &= E[(\frac{1}{n}\sum_{i=1}^{n}(X_i - \mu))^2] \\
&= \frac{1}{n^2}E[(\sum_{i=1}^{n}Y_i)^2] \\
&= \frac{1}{n^2}\cdot n \cdot \sigma^2 \\
&= \frac{1}{n}\sigma^2 \overset{n\to\infty}{\to} 0
\end{aligned}
$$
